NOBLER WORKS · NOBLER OS

We built our company an operating system.

31 modules · 17 agents · 60+ jobs that run themselves

2 founders

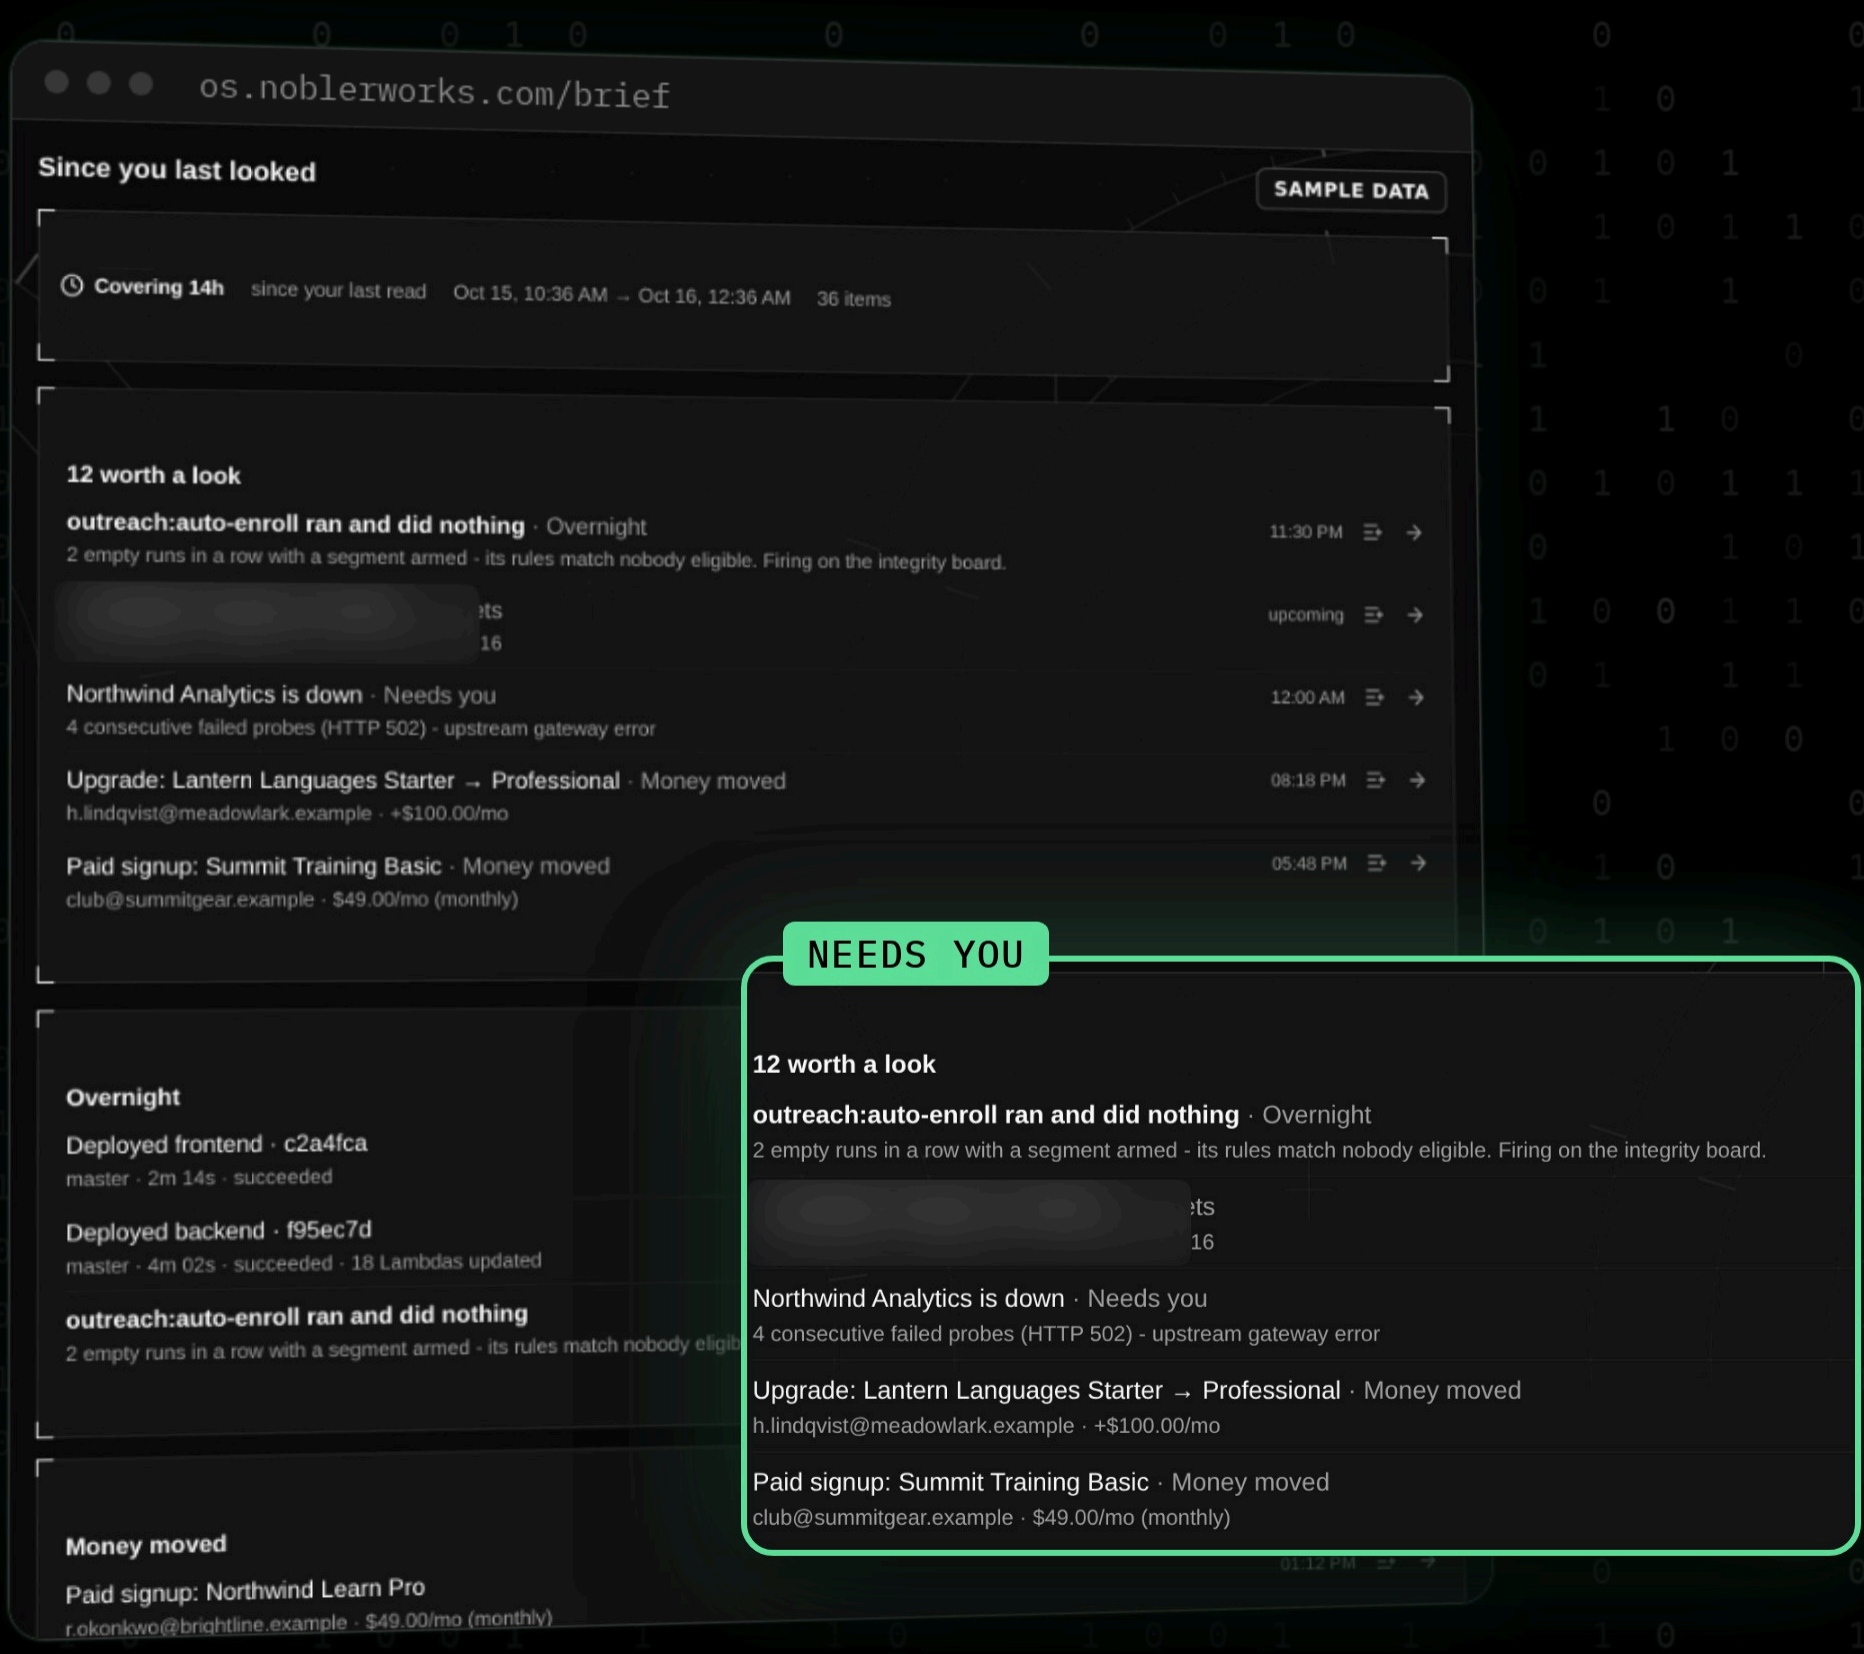

NOBLER WORKS real screens · sample data swipe →

06:10 · THE BRIEF 02

Before we open a laptop, it has read everything.

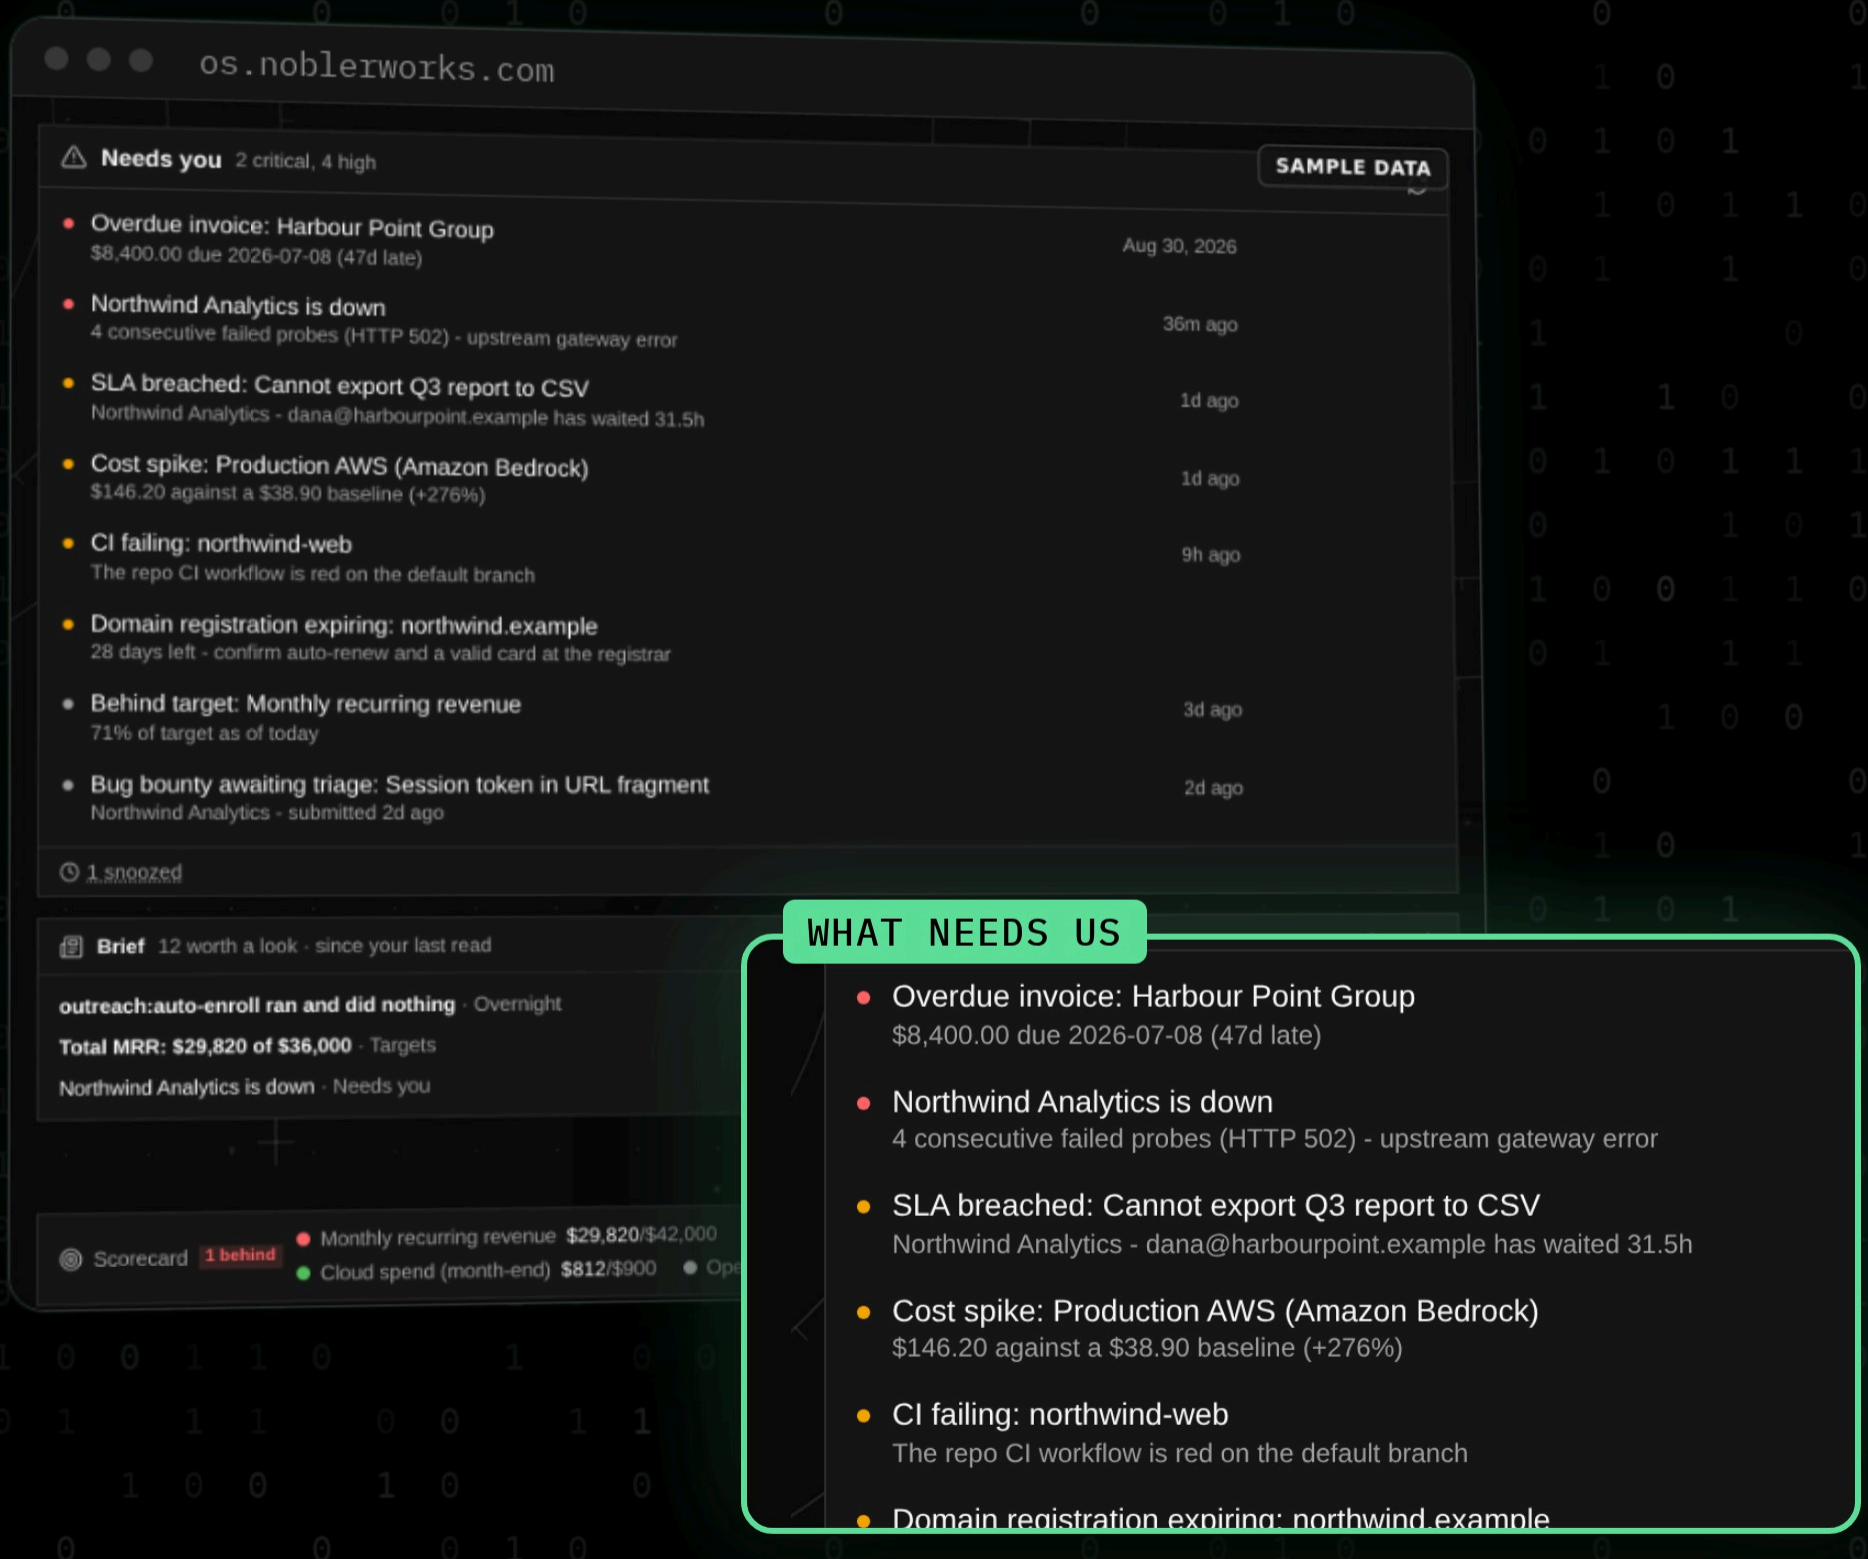

Overnight deploys, money, who replied, what needs us. One page, every morning.

HOME · ATTENTION 03

One list. Ranked across every product.

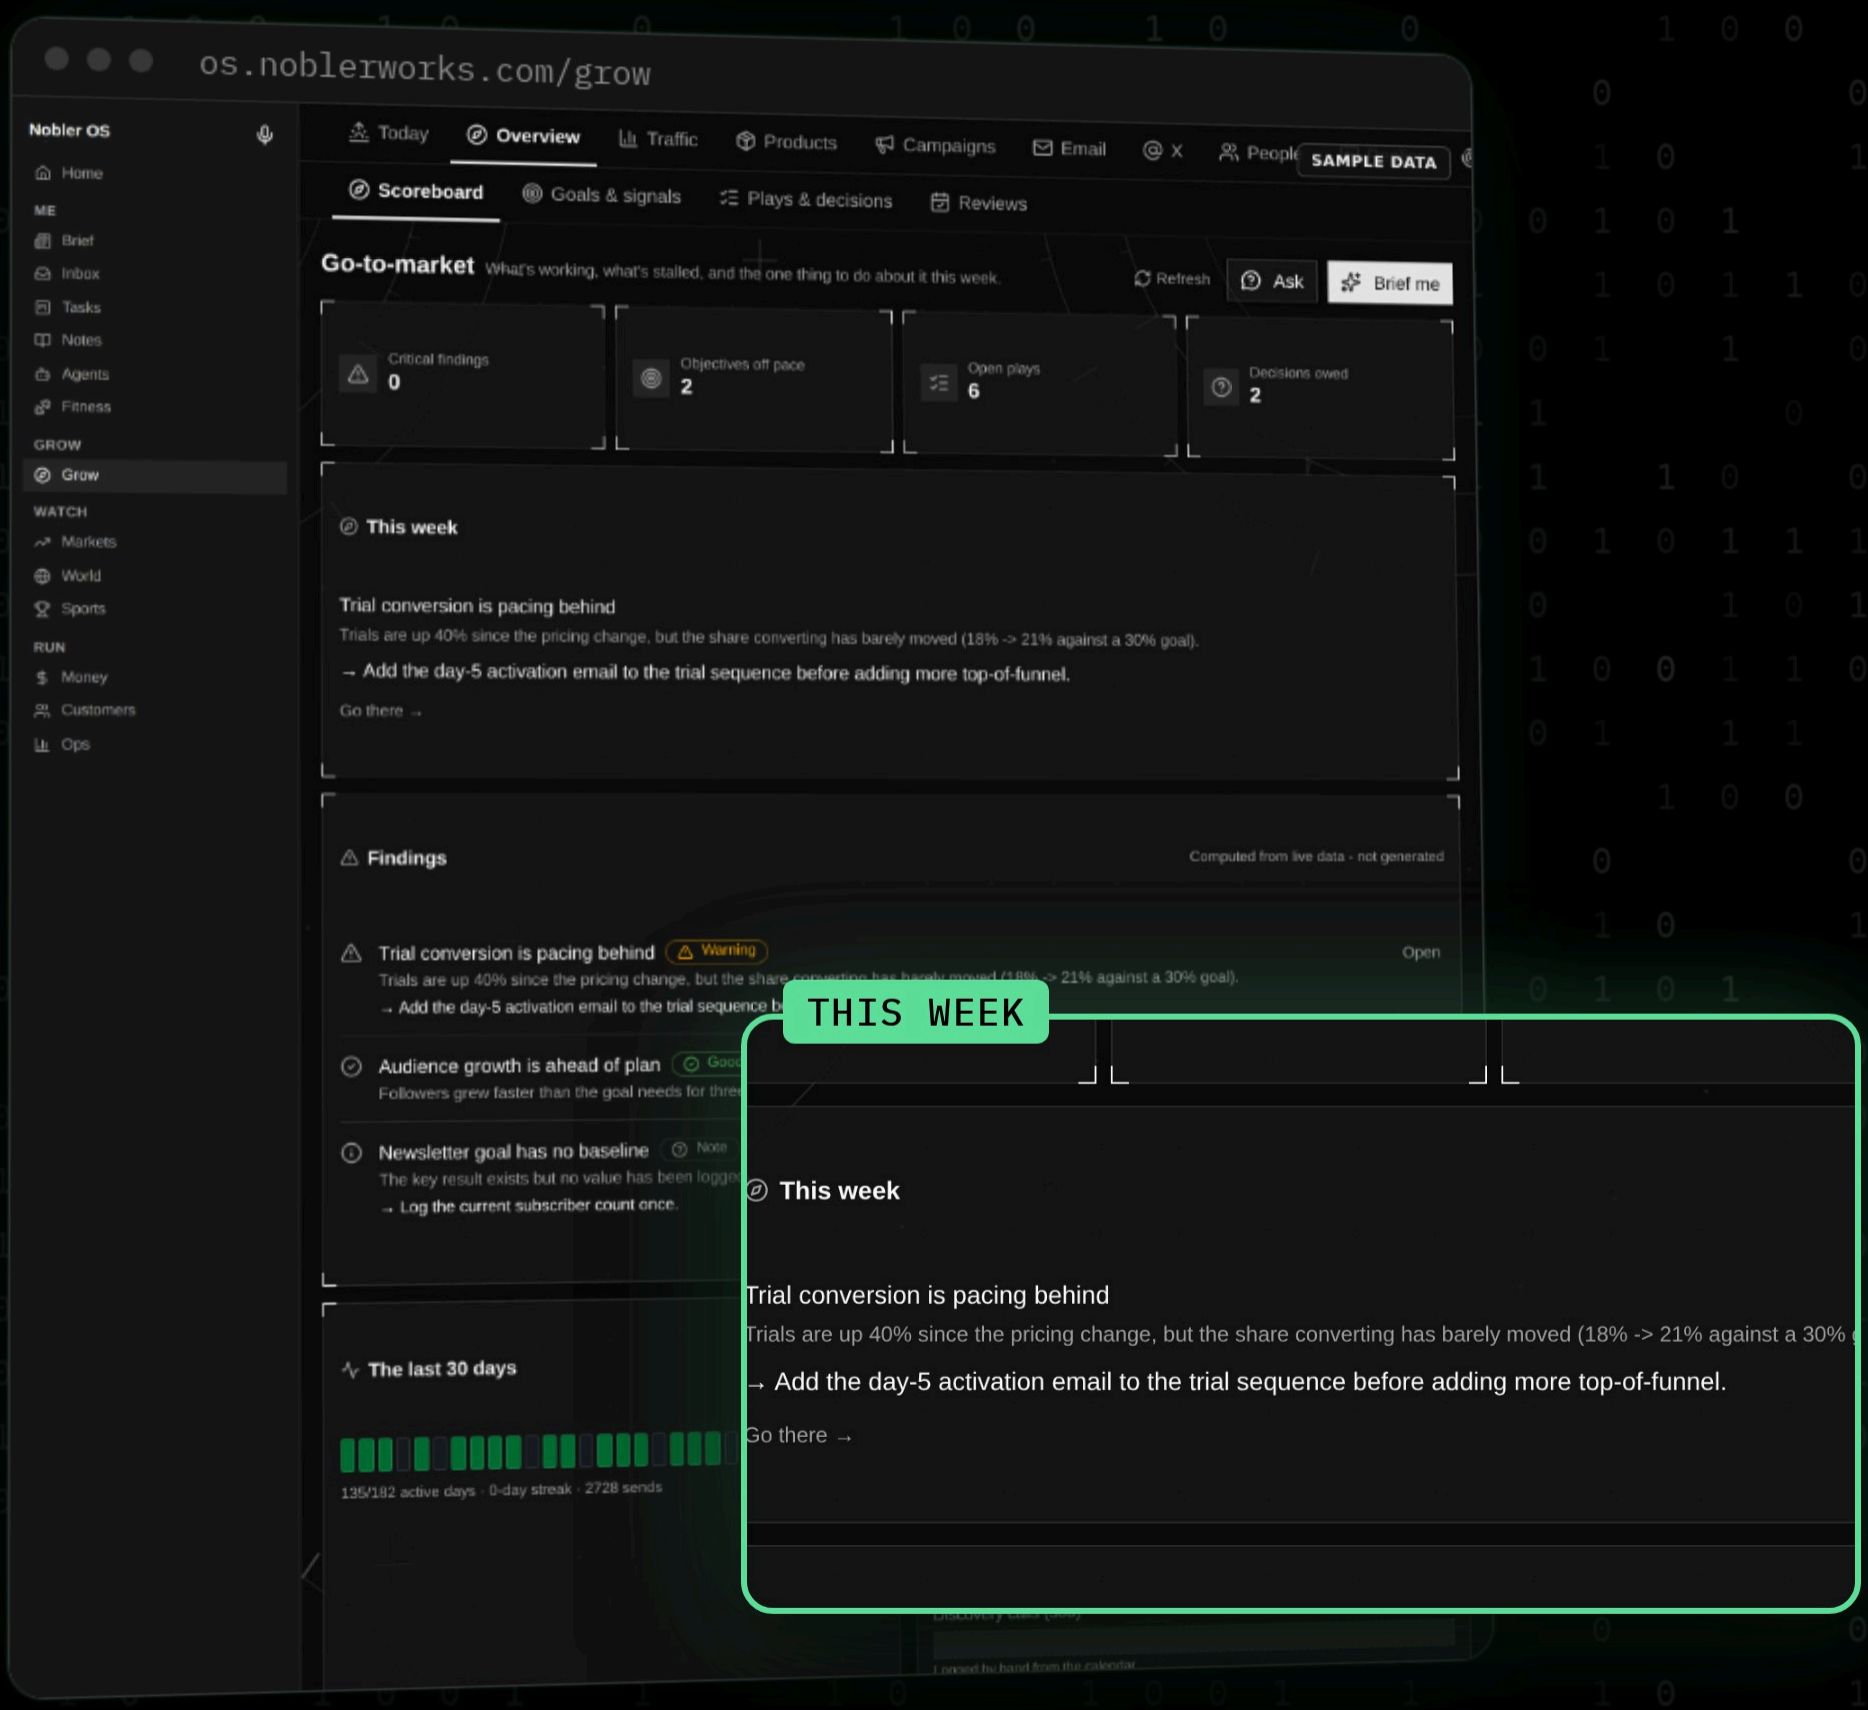

A live outage outranks an overdue invoice outranks a red build. Critical can't be snoozed.

GO-TO-MARKET · ADVISOR 04

IT TELLS US THE ONE THING TO DO THIS WEEK.

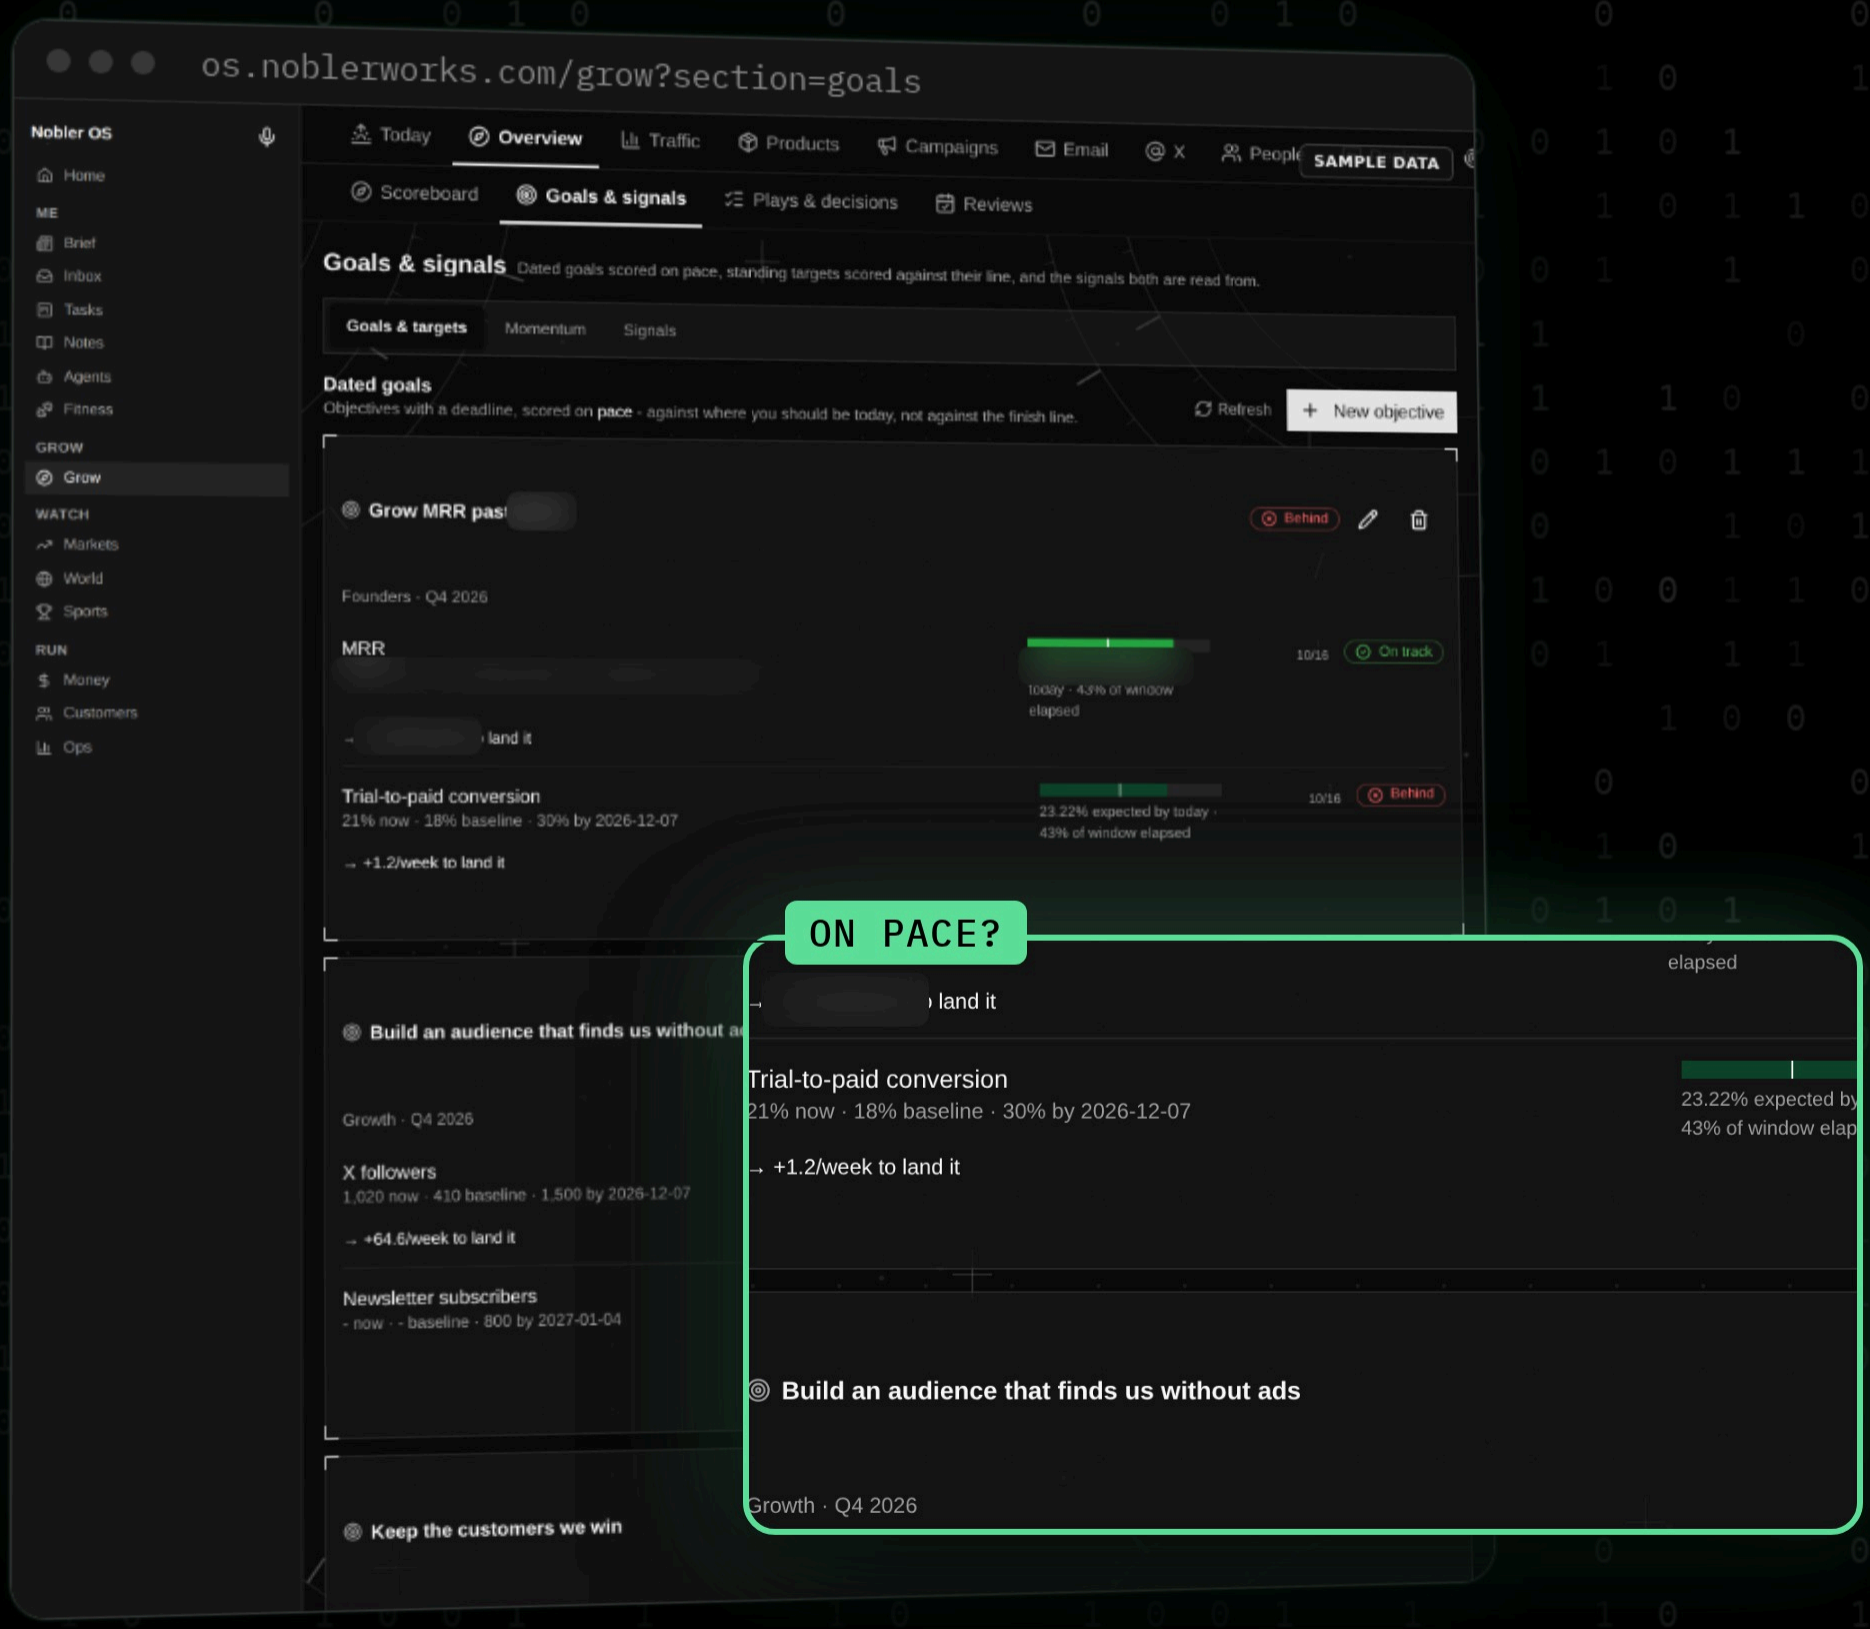

Findings computed from live data - not generated.

GO-TO-MARKET · GOALS 05

Goals scored on pace, not on hope.

Behind at 40% of the quarter is a different problem from behind at 90%. It knows which one you have.

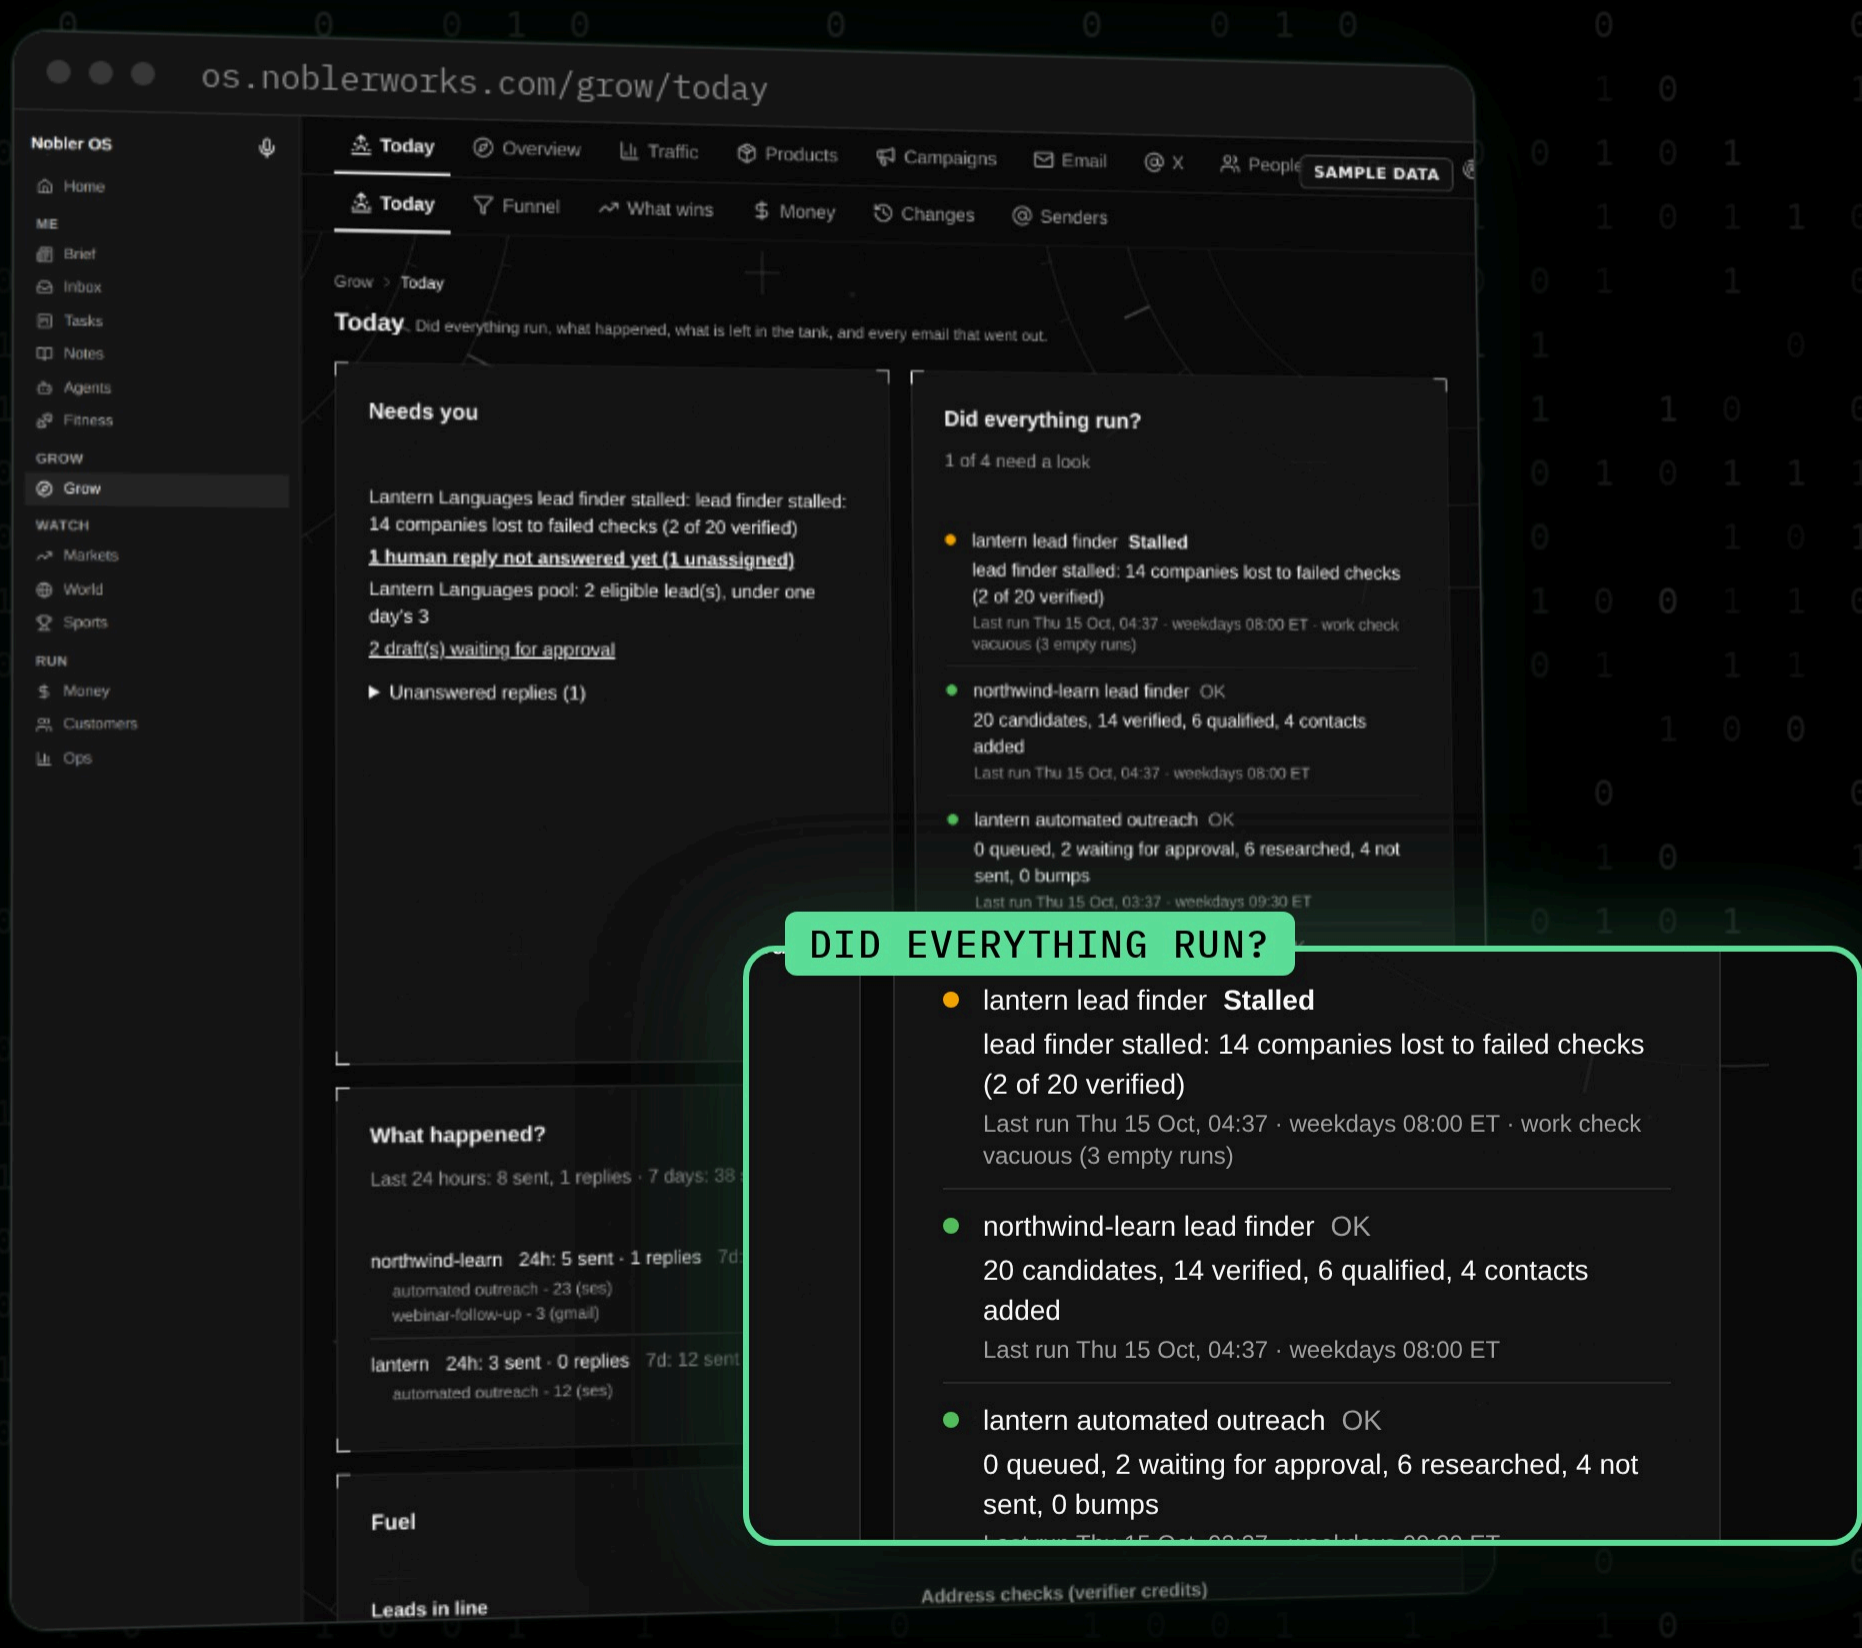

NOBLER OS

sample data →

GROW · TODAY 06

Outreach that runs itself - and fact-checks itself.

Finds the lead, verifies the address, drafts the email, checks every claim. An untrue sentence gets cut, never sent.

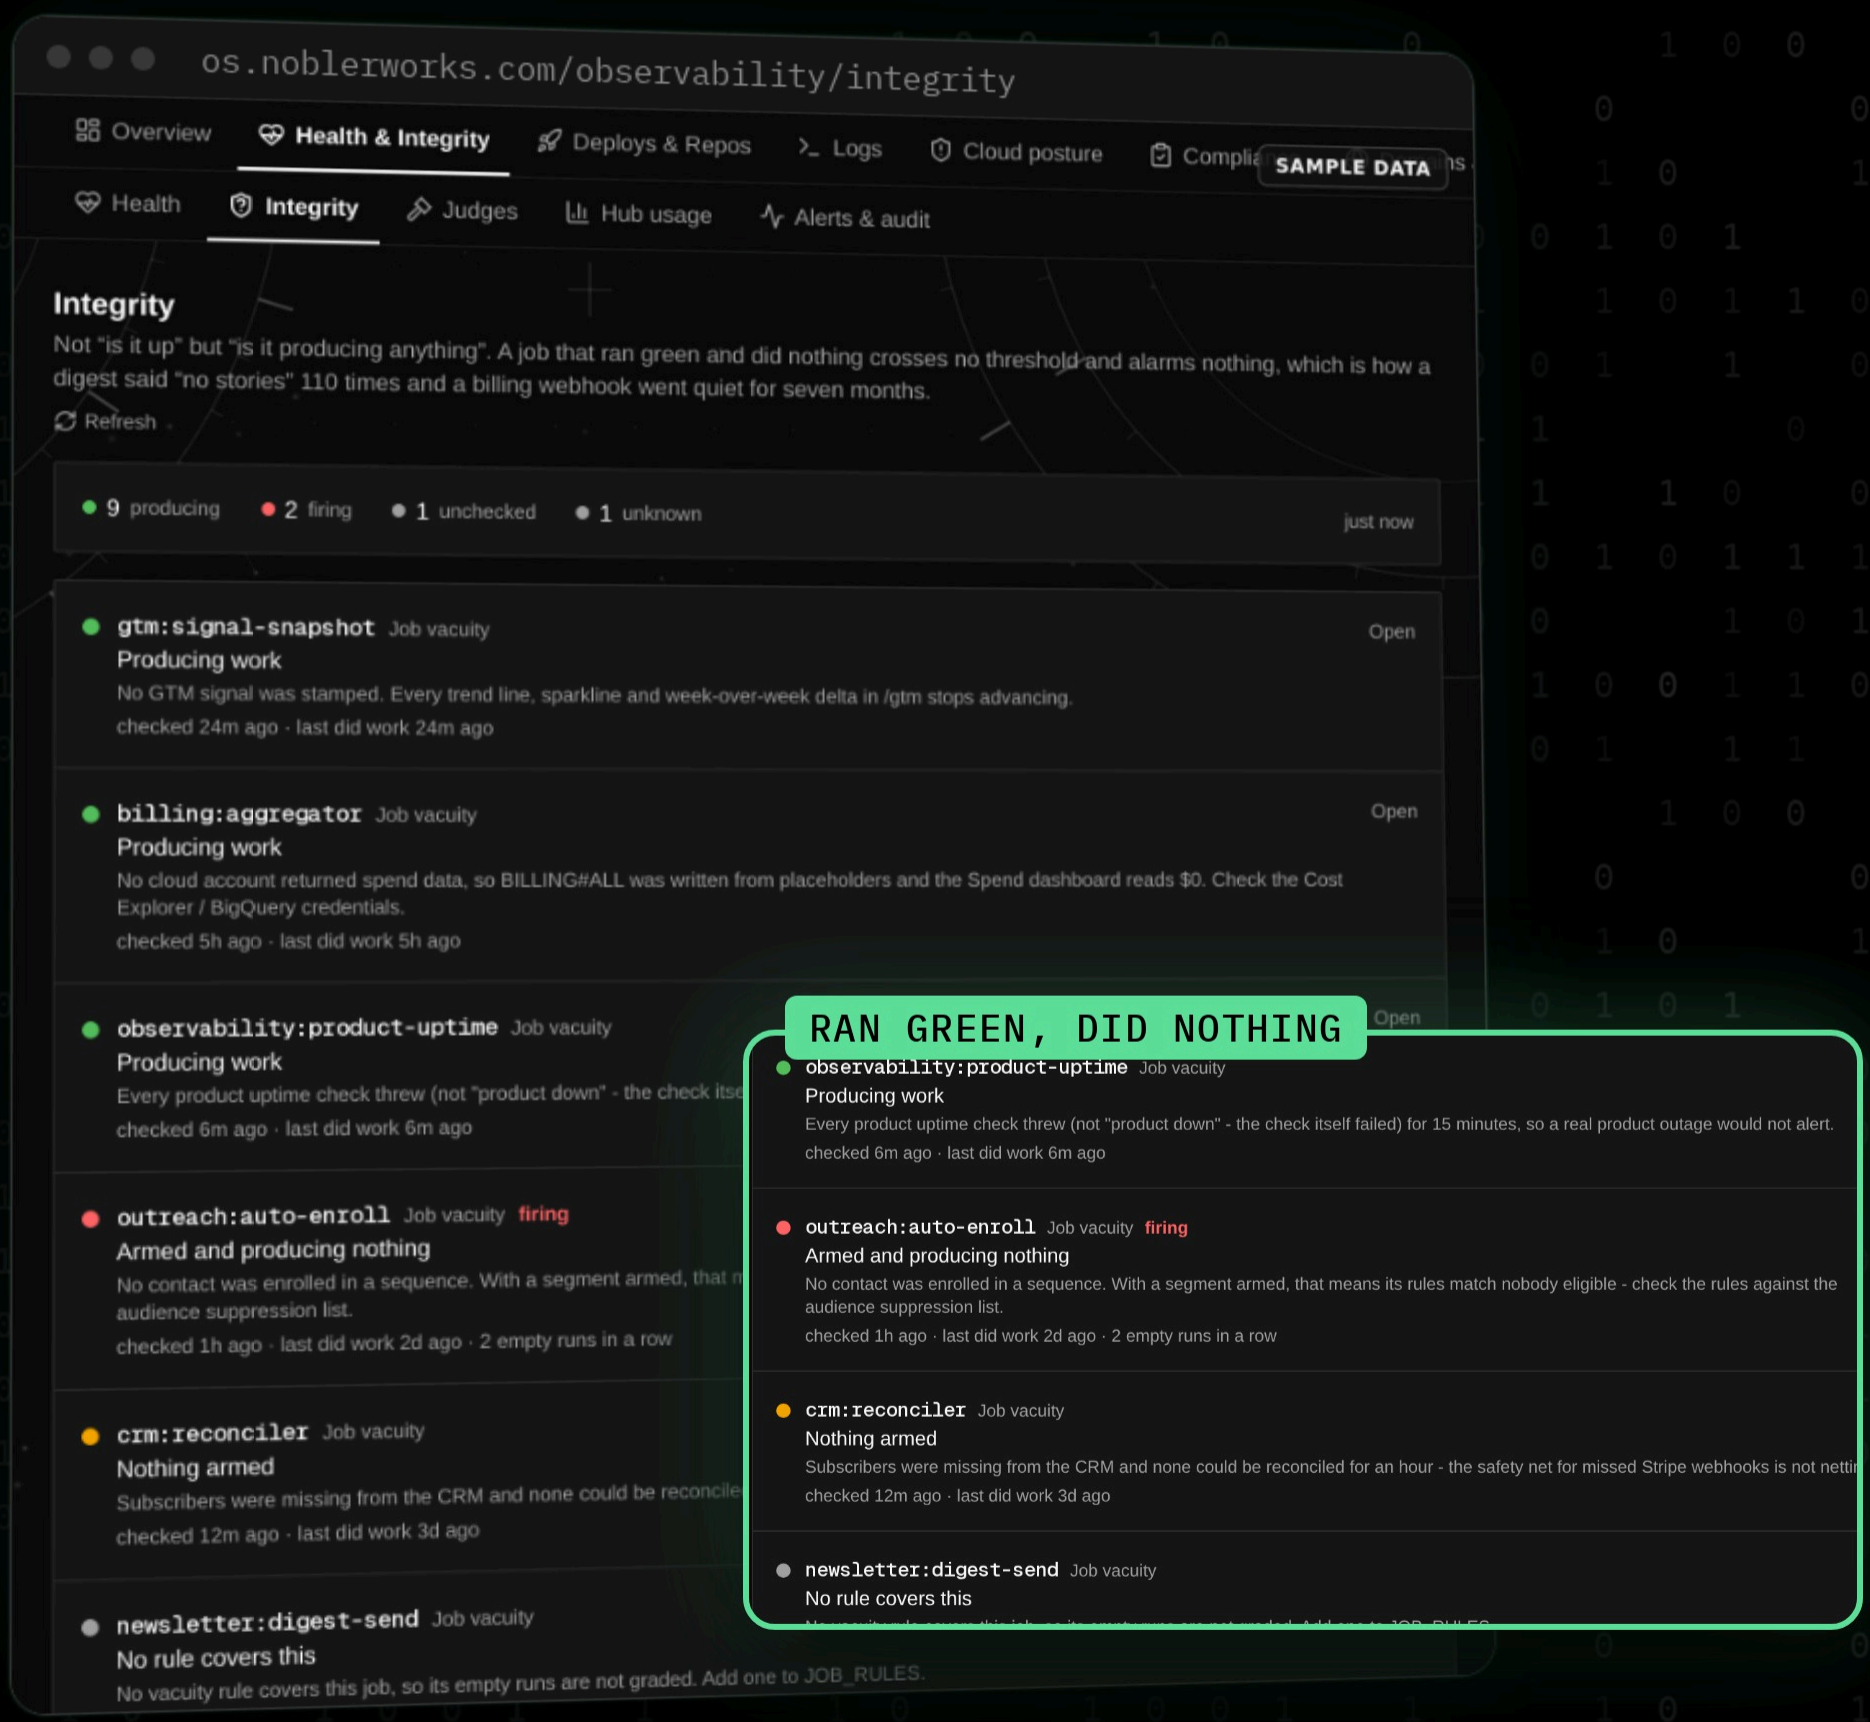

NOBLER OS

sample data →

RULE 1

Green is not working.

A job that ran clean and produced nothing is a failure. Every scheduled job counts what it actually did.

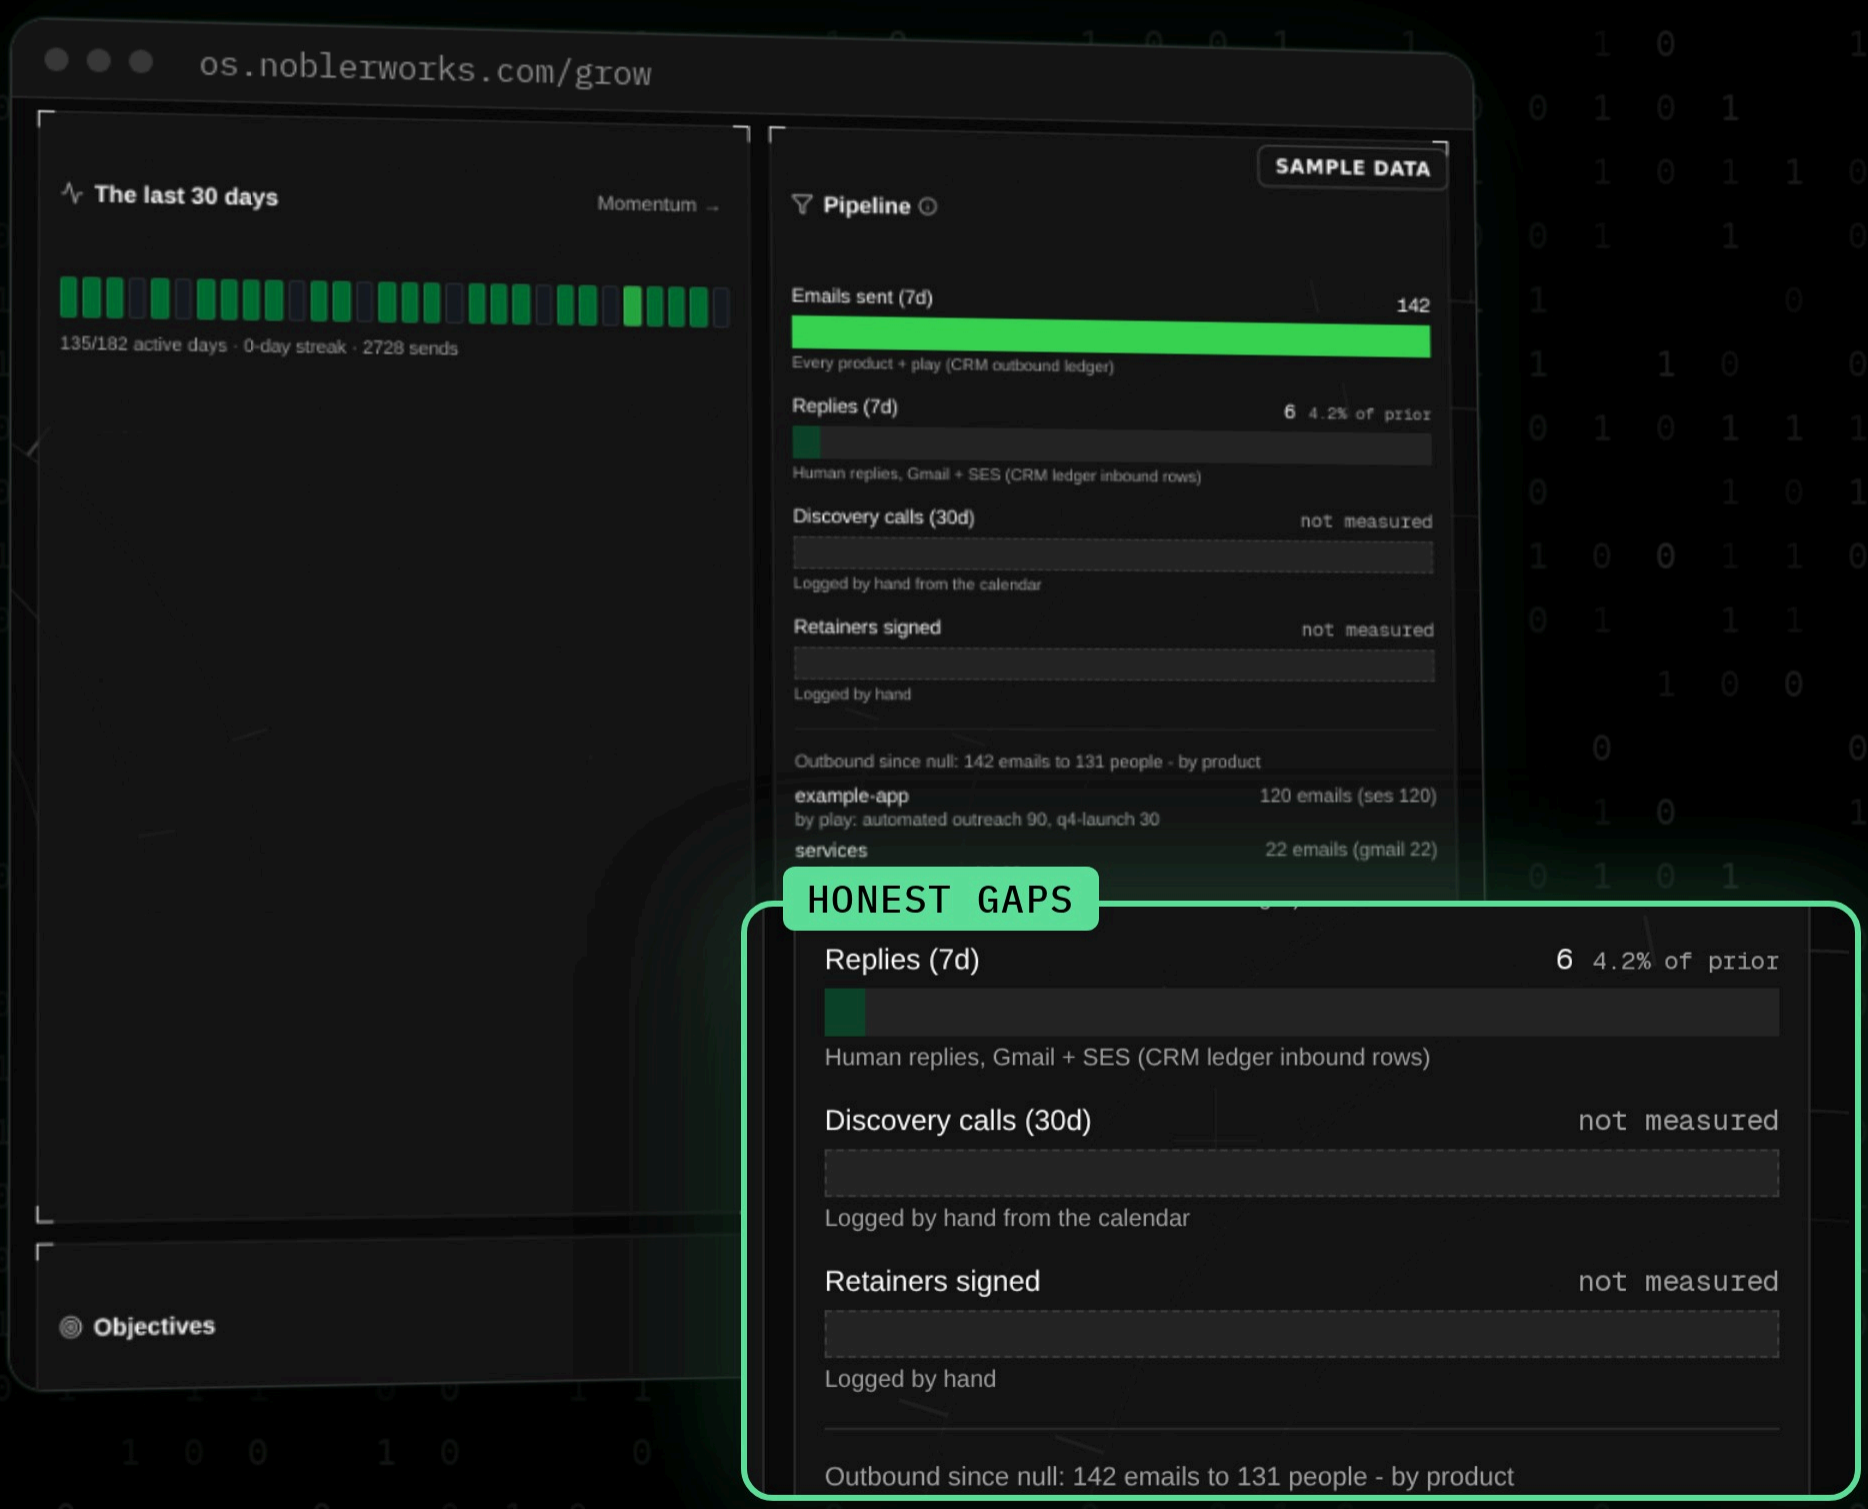

NOBLER OS

sample data →

RULE 2

Can't read it? It says "not measured". Never 0.

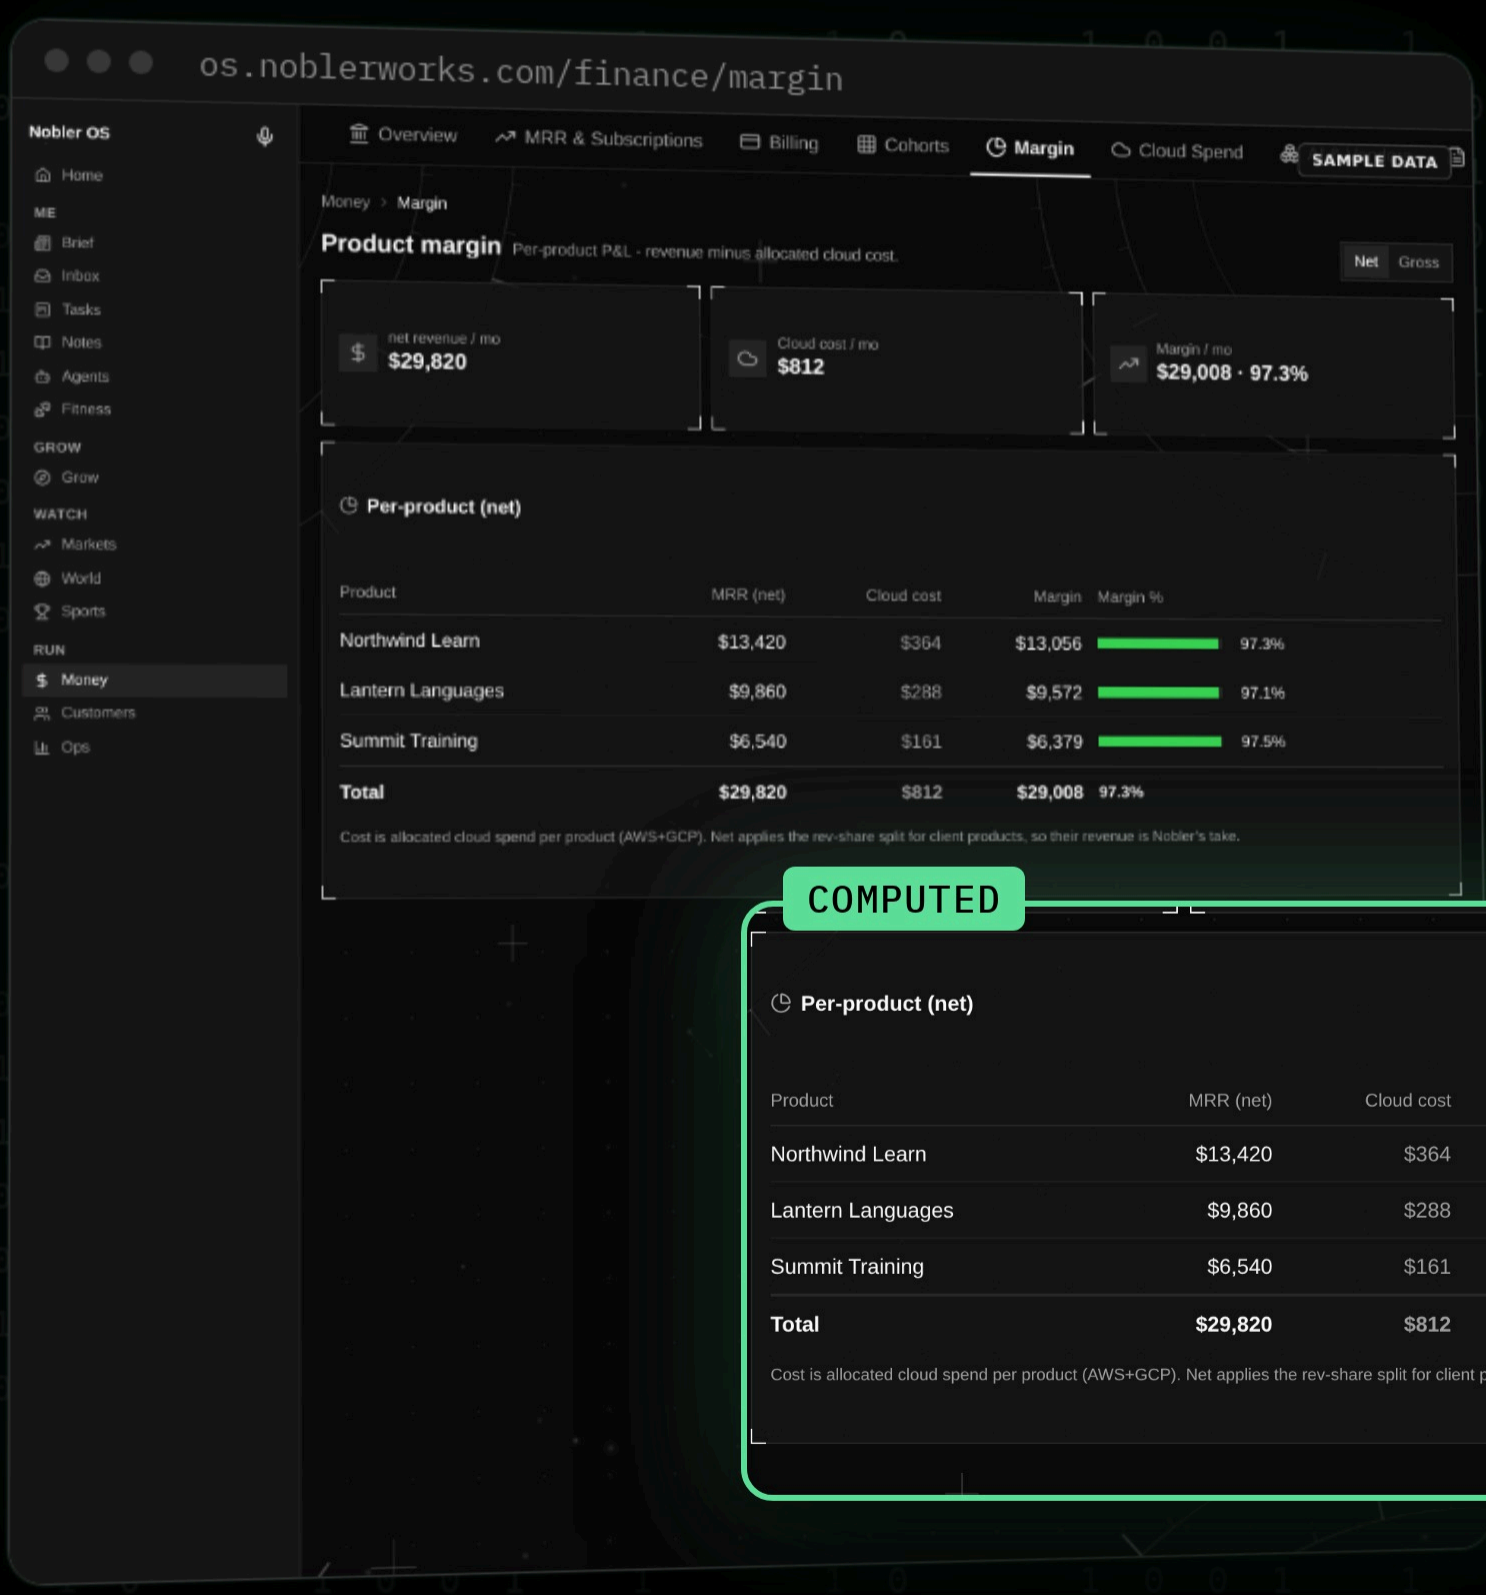

Zero is a measurement. A missing number that renders as 0 is a lie your dashboard tells you every day.

RULE 3

AI WRITES THE SENTENCES. NEVER THE NUMBERS.

Every figure is computed from the source. The model only gets to explain it.

COMPUTED

Per-product (net)

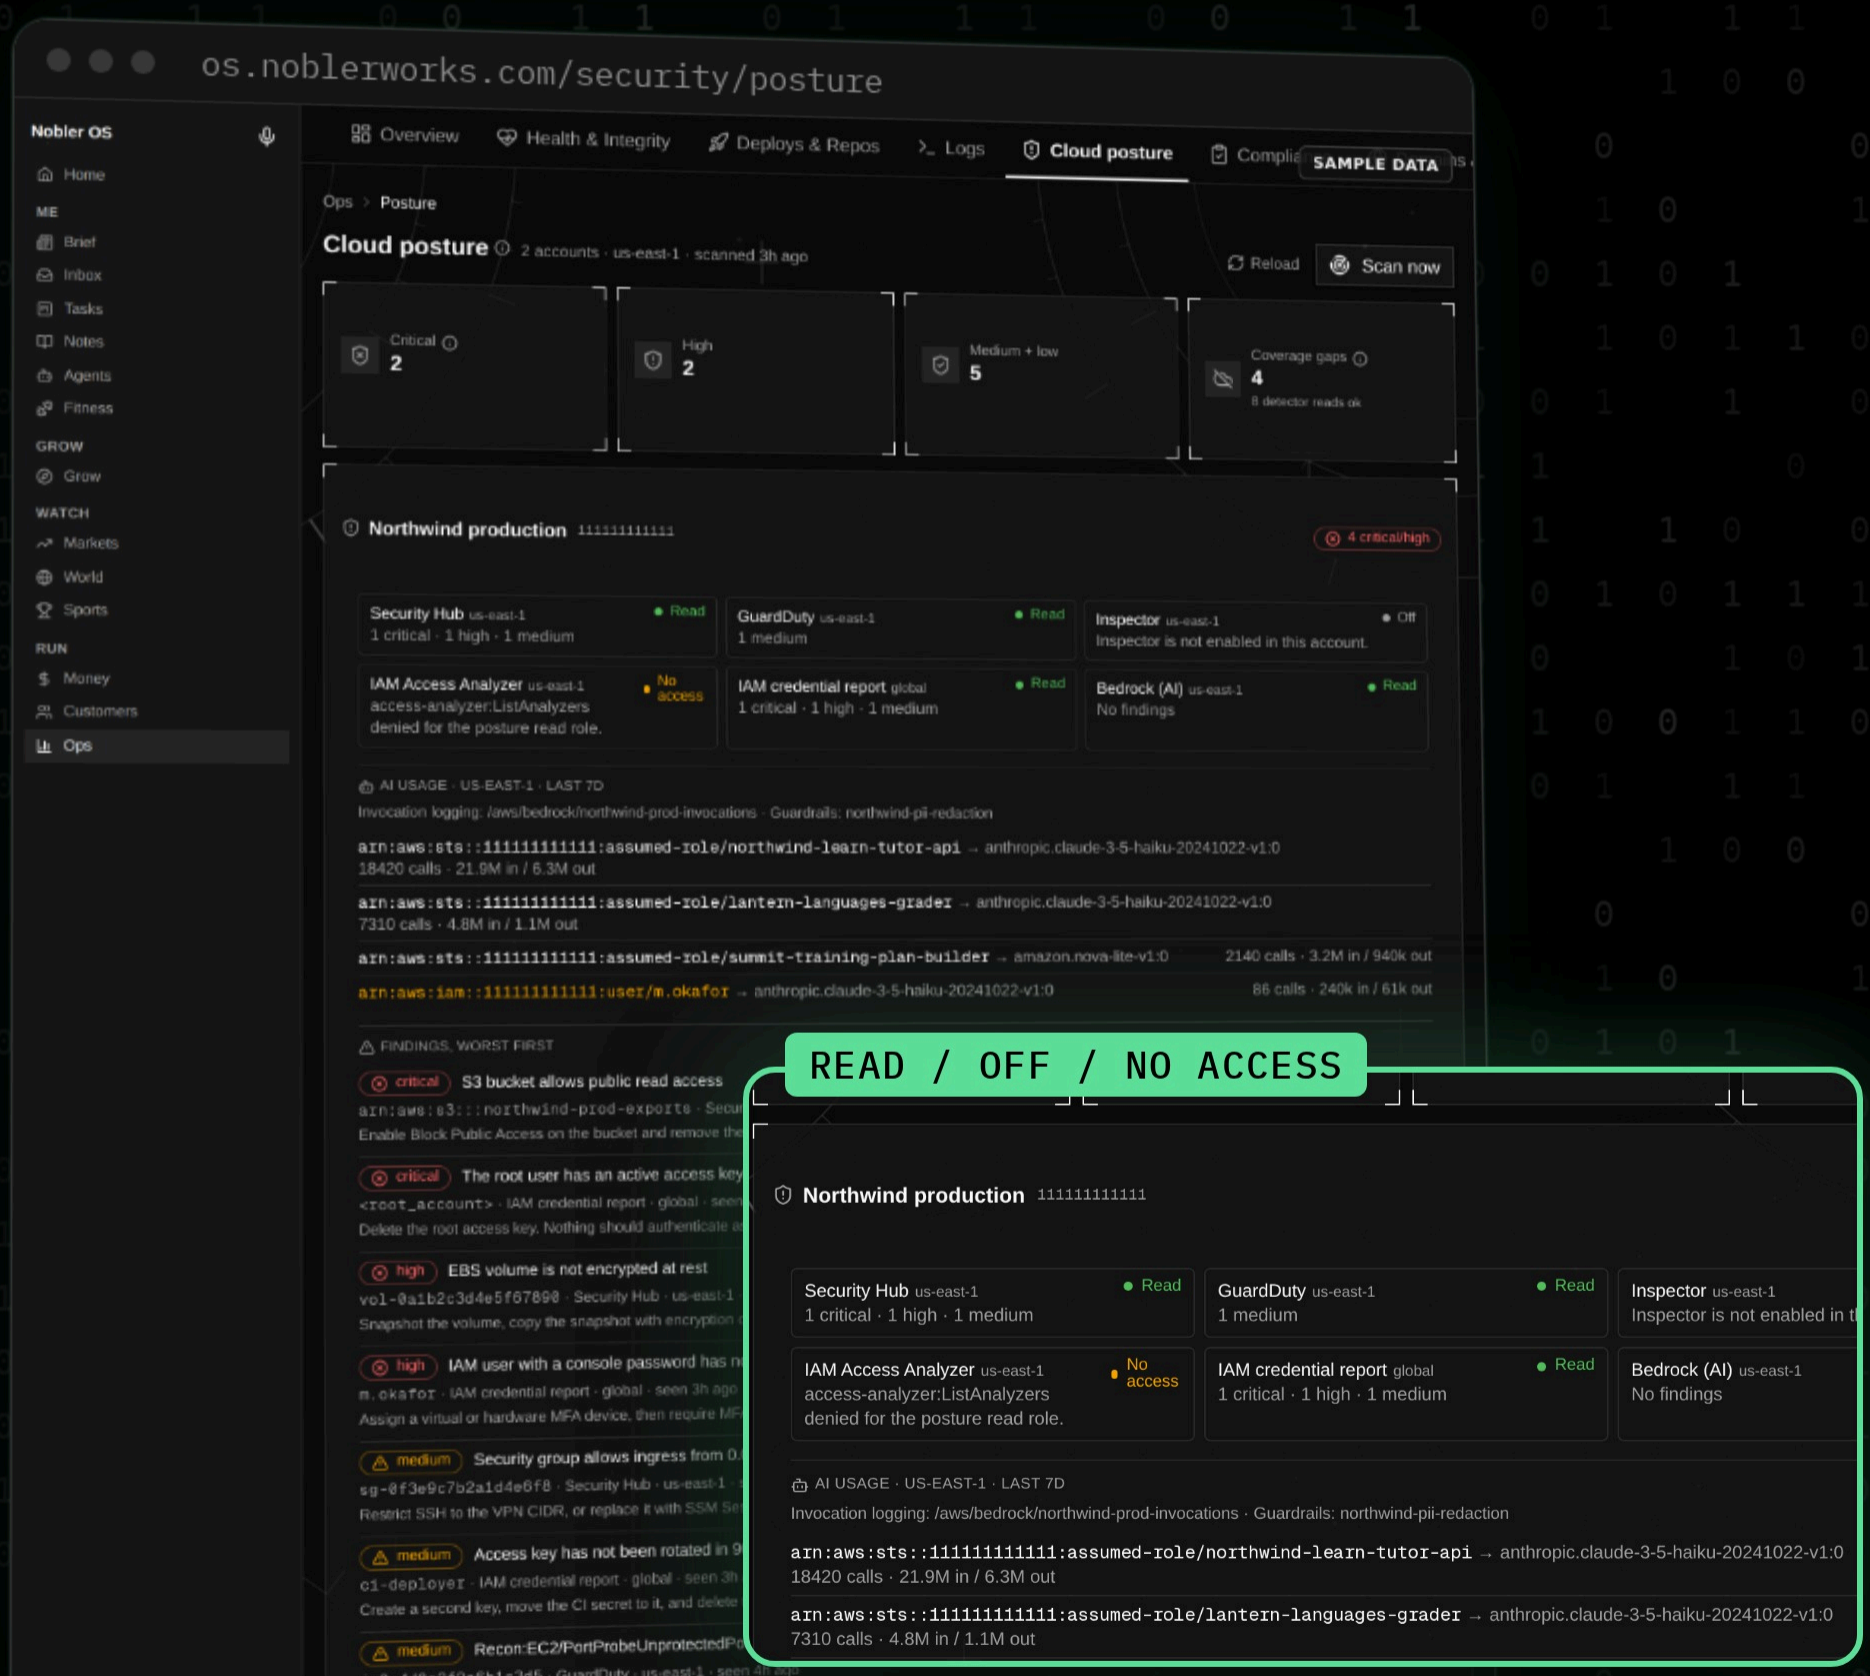

Product	MRR (net)	Cloud cost	Margin	Margin %
Northwind Learn	$13,420	$364	$13,056	97.3%
Lantern Languages	$9,860	$288	$9,572	97.1%
Summit Training	$6,540	$161	$6,379	97.5%
Total	**$29,820**	$812	**$29,008**	**97.3%**

Cost is allocated cloud spend per product (AWS+GCP). Net applies the rev-share split for client products, so their revenue is Nobler's take.

SECURITY · POSTURE 10

IT AUDITS ITS OWN CLOUD.

Posture, access, compliance. And when a detector is off, it says so instead of reporting zero findings.
